Brian - I am forwarding you an email from Candice Espinoza from the City of South Gate, which includes here contact information, a permit application (and all the documents required with the permit application) and a hold harmless statement. I have also included a typical traffic control plan. We generally email Candice, identify we are contractor for the USEPA and which project we are working on. Candice is familiar with the superfund sites in South Gate. Candice may or may not require a fee exemption letter. You will also have to make a flyer to distribute to the facilities or residences they are in the vicinity of the field activity.

Let me know if you if you need anything else.

Ed,

Since this permit is over 18 months old, you will need to reapply for a new permit for the well monitoring.

Thank you,

Candice Espinoza

**Jervis B. Webb Company Superfund Site CPT/HydroPunch™ Groundwater Sampling
South Gate, Los Angeles County, California
Traffic Control Plan**

The following Traffic Control Plan will be used during the groundwater CPT/HydroPunch™ sampling activities within the City of South Gate, California in support of efforts undertaken by the United States Environmental Protection Agency (EPA) to remediate contaminated groundwater at the Jervis B. Webb Company Superfund Site.

During groundwater sampling at locations on Firestone Place, the roadway will undergo closure of the lane closest to the CPT/HydroPunch™ boring location. Traffic control at these locations will conform to Sections 6C.03 through 6C.07; Figure 6C-1, Table 6C-1, Figure 6C-2, Table 6C-2, Table 6C-3, Table 6C-4 and Table 2C-4 of the WATCH Manual.

Firestone Place can be described as a two-way single lane roadway that is approximately 40 feet wide with moderate traffic volume and no posted speed limit.

During groundwater sampling adjacent to Rayo Avenue, no roadway closure or traffic control will be required.

All referenced typical applications and figures are attached and can be found in the 2009 Edition of the Manual on Uniform Traffic Control Devices (MUTCD) with Revision Numbers 1 and 2 incorporated, dated May 2012.

General Notes:

1. All traffic control devices shall be installed in accordance with the May 2012 MUTCD.
2. Priority shall be given to emergency vehicles.
3. Allow safe passage for pedestrian and bicycle traffic.
4. During non-working hours, all holes shall be plated or filled until final resurfacing.
5. Traffic lanes shall be a minimum of 10-feet wide unless otherwise authorized.
6. Advance warning signs shall be flashing, oscillating, or strobe lighted; 48-inch by 48-inch.
7. This plan does not apply where emergency conditions exist. Under emergency conditions, equipment and personnel that are available should be used to implement a closure, even though such closure does not meet the standards contained in this plan. As equipment or personnel become available, an immediate effort should then be made to implement the standards of this plan.

Basic Safety Tenants:

1. Minimize road encroachment.
2. Use a cone spacing of 10-feet in the taper area and 10 to 20-feet as appropriate in the work area.

**Applicable Sections from the 2009 Edition of the Manual of Uniform Traffic Control
Devices with Revision Numbers 1 and 2 Incorporated
May 2012**
